

SVS-CSI

Column Set Interactive boards

The Column Set for Interactive boards (CSI) produced by Smit Visual Supplies (SVS) provide the best possible means for hanging an interactive board. They are designed to work with the laws of physics and, in turn, provide long-lasting performance and reliability. The Columns Sets provides several important advantages.

Key features:

- * Adaptable for the latest short throw projectors (**Epson, Sanyo, Toshiba, Hitachi, etc**).
- * Adaptable for the newest interactive boards (**Smartboard, Activboard, Hitachi Starboard, Interwrite, etc**).
- * The construction is balanced out perfectly by non-visible counterweights, no adjustments over time are needed.
- * Because of its stable construction: no image trembling when projecting on the board.
- * Recommended for both system walls and/or system ceilings.
 - The full weight of the board and projector is borne by the floor.
 - The projector is attached to the frame instead of being hung to a ceiling.
- * The frame is modular build and knock-down packed for cost-saving transport.

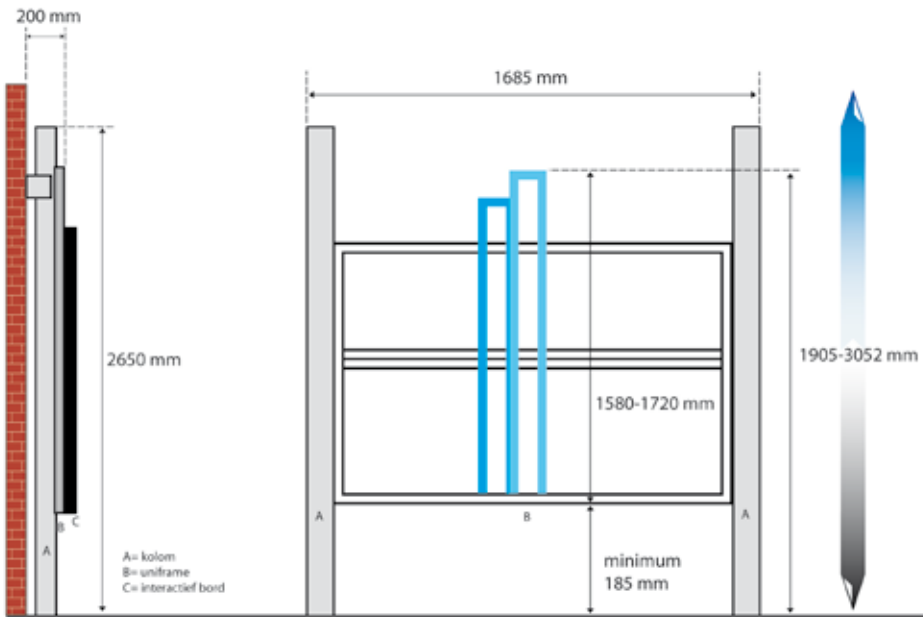

- * The board and projector are continuously height adjustable with maximum working reach.

- * Set of two enameled steel white wings, suited for markers, for additional writing space is an option for every interactive board.

- * The Column Sets are generally viewed as more attractive than other board mounting techniques. So if appearance is important....

OPTIONAL WINGS

With the optional wings you can easily expand your working surface with approx. 4 m² high quality, magnetic enamel steel writing surface. Every IWB has his own unique set of wings.

The complete program of height adjustable systems (SVS Heightline) allows you to expand your or any IWB into a multi-functional teaching tool!

UNIVERSAL SOLUTION

With the **SVS-CSI** we supply universal mounting solutions for all kinds of interactive boards. Curious to know, if we can produce a solution for your board? Give a call or send a message! Even better: visit our factory and showroom in Geldrop, Holland, for a personal view of the possibilities.

Wood, silver or white front? With SVS-CSI you can have it!
